

Alice Q. Wong

Design Engineer · Product Design × Frontend Engineering

New York, NY | alice@valour.me | +1 (909) 319-4109

Design engineer with 14 years across seed-stage startups and global enterprise teams. I sit between Product, Design, and Engineering: designing in code, so stakeholders and beta users get a real feel about how the system will behave. I also take the job the team is missing, whether that is running Scrum, turning user tests into a roadmap, supporting customers, or stepping into design mid-sprint. Small teams get one hire who covers multiple seats.

WORK EXPERIENCE

Senior Creative Technologist — Ernst & Young LLP, Consulting New York, NY | July 2022 – Present

Embedded on client product teams as the design-engineering lead: prototyping, frontend architecture, design systems, and mentoring.

Global Financial Firm — Disaster Recovery Platform:

- Founding EY engineer driving technical execution on a platform housing emergency plans for 3,000+ systems; built an interactive React prototype, with Copilot agents in the loop, that won leadership buy-in before production work began.
- Led onboarding and training for hundreds of users on a new AI generation feature, driving the early adoption that turned into a \$100K contract extension.
- Mentored junior developers through architecture and feature-planning discussions.

Cruise Line — Immersive Guest Experience:

- Directed UI developers across two independent workstreams sharing one design library, coaching juniors toward performant, readable, reusable code and helping them delegate menial work to Copilot agents.
- Crossed into design and delivery when gaps appeared: produced Figma solutions with the design team for unaddressed UX problems, and partnered with project managers to sequence tickets across sprints, increasing velocity.

Multimedia Talent Agency — Greenfield Platform:

- Founding frontend developer to create a reusable dynamic form framework that saved months of development. Built and extended the design system, mapped user flows as state diagrams the whole team could read, designed micro-interactions.
- Served as Scrum Master alongside the engineering work, and ran user-testing observation.

Designer & UX Engineer — Lynxtool Jan 2021 – Mar 2022

- Designed a node-based programming tool in Figma and created the design system behind the node editor.
- Built it in TypeScript with HTML5 Canvas Context2D and Svelte, visualizing abstract programming concepts.

Frontend Engineer — Stedi Inc. July 2020 – Dec 2020

- Partnered with Product and backend teams to design a web application for B2B logistics and transaction messages.
- Built features in React, EmotionJS, and TypeScript.

Designer & UX Engineer — Dark Inc. June 2018 – June 2020

- Worked directly with the CEO and CTO to design editor features that made backend development approachable for programmers of every background.
- Owned the frontend codebase end to end: code review, rendering and performance optimization, and advocating for user experience in every bug fix and feature.
- Ran customer support for users building APIs in Dark, then fed what I learned back into specs, style/implementation guidelines, and scoped designs that fit real engineering capacity.
- Implemented features in OCaml and ReasonML whenever engineering resources ran low, and onboarded new engineers onto the Elm/OCaml stack.

Sr. Frontend Developer, Consultant — Techolutions to J.Crew June 2017 – Jan 2018

- Migrated jcrew.com from Backbone.js to React and A/B tested features to drive sales.
- Built proofs of concept that helped the designer define specifications for immersive product detail pages.

Android Software Engineer — JW Player / Longtail Video Apr 2016 – Oct 2016

- Prototyped the new mobile web player in Framer, and fixed device-specific issues in Android SDK.

Full Stack Developer — Peloton Cycle Nov 2014 – Mar 2016

- Built solutions generating per-ride metrics images for riders to share on social media. Developed features in Angular, internal CMS, and Python API.

Lead Frontend Developer — Bytemark Inc. July 2013 – Oct 2014

- Owned ticket-sales CMS, built bulk ticket purchase web portal, and prototyped ticket designs in HTML5 Canvas.

SKILLS

Design: Figma, Adobe XD, Photoshop, After Effects, Animate, Sketch, Prototyping in Framer, Principle, Origami, Design systems, micro-interactions, user testing and affinity mapping

Engineering: TypeScript/JavaScript (React, Svelte, Vue, Angular, D3.js, Three.js, WebGL, Canvas Context2D), Python, OCaml/ReasonML, Elm, C#, C++ (OpenGL), Java (Android, Processing), Swift, HTML, CSS, LaTeX

AI Toolset: Claude Code, VSCode Copilot

EDUCATION

- M.S. Computer Science, research focus in HCI — Stony Brook University, 2012
- B.S. Applied Mathematics and Computer Science — Stony Brook University, 2010
- UX/UI Design Bootcamp — Ironhack Barcelona, 2018 | User Experience Design Certificate — General Assembly, 2015
